

## BIOSECURITY CHECKLIST FOR ACCOMMODATION

**We have new biosecurity requirements for guests and ask that you help us keep Rotoroa pest free. This checklist MUST be completed prior to your departure for Rotoroa.**

Please read this biosecurity checklist and ensure *each member* of your party has complied with the luggage requirements specified.

Bring this completed form with you; it will be collected upon arrival at Rotoroa. Only one form is required per party.

If you have any questions, please see: [www.rotoroa.org.nz/conservation/biosecurity-information.aspx](http://www.rotoroa.org.nz/conservation/biosecurity-information.aspx)

<b>Guest party name and booking reference:</b>		
<b>Intended date of visit:</b>		
<b>Item</b>	<b>Action</b>	<b>Completed</b> <small>(please tick)</small>
Packs and bags	I have emptied my pack/bag, cleaned it out and checked it to ensure all seams and side pockets are free of seeds and dirt. <i>Seeds and insects love the bottoms and seams of packs or bags</i>	
	My pack/bag is clean, in good condition and secure against stowaways such as mice. <i>If you can poke a pen through any hole it's not mouse proof</i>	
Food	I have packed my food into sealed containers <i>such as fish or chilly bins and sturdy cardboard boxes. Banana boxes or any box with holes in it is a biosecurity risk and prohibited</i>	
Fishing gear	I have checked and cleaned all my gear and have it packed in a secure container with a lip or a zip. I will take all my left over bait and rubbish home. <i>Bait can attract rodents ashore. Bait bags can trap wildlife such as seabirds.</i>	
Footwear	I have cleaned my boots and shoes so no seeds and soil is present. <i>Remember to check the tread and around the laces</i>	
Clothing	I have inspected my socks, raincoat and other high risk items for seeds? <i>Check any velcro parts or inside seams</i>	
Boats, helicopters, barges	I have inspected my boat for rodent signs and insects and am confident that there are no stowaways on board	
<b>I and my party have run through this checklist prior to packing and are confident there are no biosecurity risks.</b>
